

**If this system experiences a longer than normal shipping time, several days, it may require burn-in with ozone for a recommended period of 24 hours in the flow mode prior to use. To conserve gas, it can be setup for 2 LPM flow with the maximum amount of ozone allowable (I.E. 1 PPM). Be sure to filter or vent the ozone to avoid exposure. Also, burn-in may be required when the ozone has not been used for several days.**
