

For 40 years, Environics Inc. has been dedicated to advancing precision gas delivery and control for laboratories, research facilities, and industrial environments around the world. Founded by a small group of investors with a clear focus on quality, accuracy and performance, we began by addressing a critical need: reliable, well-engineered gas blending that users could trust. From the beginning, Environics built its reputation on technical expertise, responsive service, and a deep understanding of customer applications.

Make your own calibration gas in seconds!

With the Environics Series 200 Computerized Gas Standards Generator, you can rapidly and automatically generate your own precision gas calibration standards...from percent levels to PPM and even PPB concentrations.

The Series 200 automatically produces gas standards for single or multi-point calibration of gas chromatographs, mass spectrometers, fixed or portable monitors and other gas analytic devices.

This unique instrument packs a powerful microcomputer with full 32 bit computation precision to accurately program its mass flow controllers.

The Series 200 does the work for you by programming the entire gas blend. Just touch the keyboard to set such parameters as gas concentration and flow. Environics' user-friendly software, with step by step prompting, guides you all the way. In moments, you're blending your own precision gas standards.

Use the Series 200 to dilute higher concentration cylinders, produce close tolerance blends or create gaseous atmospheres.

The Series 200 means the end of banks of expensive, low concentration, unstable gas cylinders. It virtually eliminates the tedious "knead and needle" bag and syringe method of gas dilution.

The RS-232 serial data interface lets you download the details of each gas blend to a printer for that all important "audit trail". Or, let your host computer run the series in a completely integrated system.

If you want all of the benefits of generating your own precision gas calibration standards with none of the hassle or expense, call or write us. Environics Inc., 33 Boston Post Road West, Marlborough, MA 01752-1840. Phone: (617) 481-3600; Fax: (617) 481-5125; Telex: 62598220.

When it comes to making gas calibration standards, we've got the answers.

Environics

As Environics grew, so did its portfolio of solutions. Leadership and ownership shifted to CEO Cathy Dunn and President Terrence Dunn beginning in the early 90s, and the company steadily expanded into sophisticated gas blending, calibration, and customized systems designed to meet increasingly complex requirements. By listening closely to customers and investing in innovation, Environics established itself as a trusted partner to companies in a wide variety of industries, universities, government laboratories and research institutions. Each new product reflected our commitment to accuracy, repeatability, and long-term reliability.

Environics[®]

Led by President Rachel Stansel as a second generation family and women owned business, Environics Inc. is recognized for combining proven engineering with thoughtful customization, helping customers solve real-world challenges across a wide range of applications. While technologies and markets have evolved over the past 40 years, our guiding principles have remained constant: a dedication to quality craftsmanship, a collaborative approach to problem-solving, and a genuine commitment to the success of our customers, employees and partners. As Environics celebrates this milestone anniversary, we also look ahead—continuing to innovate and build on a legacy of excellence established over four decades.
